

STANDARD OPERATING PROCEDURE – VEHICLES .

DIRECTIONS MUST BE READ BEFORE USE:

1. Prepare the cabin by cleaning and removing anything that may cause odours, e.g. waste food, rubbish etc.
2. Remove pets and people from the vehicle.
3. It is suggested that the air conditioning is turned on and is left running as the mist will enter the system and eradicate any hidden germs within the cooling system – especially **legionella**.
4. Shake can well for 30 seconds before use, then use immediately.
5. Place the can in a standing position near the middle of the vehicle with the nozzle pointing upwards and into the cabin.
6. Press and lock the total release valve button (make sure the button is pressed firmly directly downwards and not in a sideward action) the button will click when in a locked position and a mist will be dispersed from the central nozzle. If the button is not locked the mist will stop being dispersed correctly.
7. Exit the vehicle and close the door.
8. Wait at least 15mins before returning, turn off air con and ventilate the cabin as necessary (i.e. open windows / doors). Leaving the vehicle for longer/overnight or weekend is perfectly fine.

One can will treat 1 vehicle. Cargo holds can also be sanitised as required.

Please use correct PPE when using X-Mist, face mask, goggles and gloves should be used to avoid accidental contact and inhalation.
